

Thank you for choosing our product!

K-718A

Please read this manual carefully before using the product.

Please do read the Cautions, for fear that unwanted results arise from improper operation.

Teach your pet that silence is golden.

If you find yourself wondering when you might get a decent night's sleep, enjoy a quiet afternoon, or be smiled at by your neighbor again, it's probably time to think about a bark control collar.

The fact is, dogs bark. They do it when they're excited or when they sense danger. Some do it when they're bored - or worse, for no reason at all. In these cases, you want to teach your friend that barking is only permitted under certain circumstances.

Our bark control collars are marvels of miniaturization and innovation. They monitor for your dog's bark and automatically let him know when he needs to be quiet. These remarkable collars can remove the strain that excessive barking has put on your relationship with your otherwise perfect pal.

Stop Excessive Barking with a Startling Burst of Spray.

A great choice for big dogs, this comfortable and lightweight collar stops barking with a quick spray. The collar uses Special-purpose Bark detection to ensure that the unit can only be activated by your own dog's bark

The features of the product:

1. The small aluminous gas storage bottle can be replaced. Every bottle can eject the spray about 30 times.
2. The small aluminous gas storage bottle can be refilled with the spray.
3. The lithium battery can be recharged.
4. The power can be turned on or off.
5. You can choose the level of bark sensitivity that cause the burst of spray.
6. The level of ejecting spray can get stronger automatically.
7. The length of nylon collar can be adjusted.

The product has no side effects like the dog feeling scared, hurt or painful.

一、Operational instructions:

1. There is a magnetism induction power switch in the jet apparatus. The black cover of the gas storage bottle is magnetic. When it approaches to the magnetic part of the jet apparatus, the indicator light beside the jet apparatus sign will flash. If it keep lighting after flashing about 3 seconds, that means the power switch of the jet apparatus is on. If it doesn't light or goes dim, it means it is short of power., then you should charge the battery with the special charger. Let the cover approach to it again, the indicator light will flash, and it will go out after flashing about 3 seconds, which indicates that the power of the jet apparatus is off.

2. You can choose from three levels of bark sensitivity. There are three indicator lights near the power switch. When the power is connected, only one indicator light is light, at that time the bark sensitivity is the highest(the weaker bark also can cause the burst of spray.) If the black cover approaches to the indicator light once time (don't keep over 3 seconds, or the machine will treat it as a shutdown order.), the number of indicator light getting light varies. If one indicator light is on, it means the bark sensitivity is the highest. When it comes two, that means the bark sensitivity is in the middle, and three indicator lights are on, showing that the bark sensitivity is at the lowest level (only the stronger bark can cause the burst of spray).

The master can adjust the bark sensitivity according to their need.

3. Adjust the length of the collar to fit the neck of the pet. The proper tightness should be that you can insert a finger in between.

4. The lithium battery installed in the jet apparatus can be recharged. Please use the charger the product offers to charge it. The power indicator light of the jet apparatus will flash when it is being charged. If the charging has been finished, it will keep lighting. It will cost 2 to 4 hours to charge every time. You should charge the jet apparatus for 8-12 hours at the first time.

5. The methods of fixing and refilling the gas storage bottle

5.1 Screw off the positioning bolt. Rotate the gas storage bottle and pull it out. Put it in the receiver, and screw up the positioning bolt. (Don't screw too forcibly, or the thread of the bolt will be damaged.) Then the fixing of the gas storage bottle will be finished.

5.2 When the gas storage bottle is short of spray, please take it down and use the refill bottle to refill.

5.3 The refill bottle is used to refill the gas storage bottle. Please upside down the refill bottle and insert the nozzle into the refill hole of the gas storage bottle. Press firmly to fill the unit. (20 seconds)

二、Instructions:

1. At the beginning of using the product, don't wear and take off the collar too often in four or five days, so that the dog can adapt to the product as soon as possible and won't feel fidgety when wearing it. Be patient to help the dog get used to the product, don't punish or treat it rudely because they don't listen to you at first. If the dog follows you to use the product, reward it immediately and properly.

2. Once the dog can understand the order you send by the receiver, you should require your dog to make a clear and correct response to your every order. Don't use it without purpose, or it will confuse the dog. If you have worn the receiver collar for the dog, don't wear other types of collar.

3. Ensure the product is in the working condition at any moment, we suggest you check it everyday.

4. Before each specialized training, let the dog wear the collar for about 20 minutes to get used to it. You can train your dog with the receiver, and combine it with your body movements or other instruction methods. You can refer to other related books and materials about this. Please pay attention to the related books we published.

If you want the product to achieve the expected maximum effects, you need to make specific training to the dog.

三、Cautions:

The product isn't a toy, don't let the children use it, and don't use it casually.

Before using the product, make sure your dog is healthy.

Don't immerse it into the water. You'd better not use it in the rainy day.

Please clean the product with dry cloth.

Don't let your dog catch or bite the product.

When the electricity of the batteries in the receiver is not enough, please charge them in time.

We strongly suggest that you should charge the batteries with the charger we offer.

Don't disassemble the product, the damage caused by it isn't in our warranty scope.

If the dog feels uncomfortable when wearing the collar, you can take it off for a while, and use it again when the dog calms down.

The temperature the product can be used in is between 2 and 45 centigrade. Beyond or below this temperature range will damage the product, and this kind of damage isn't in the warranty scope.

The product can only be used on the healthy dogs. If the dog has had physical or mental problems, please turn to the professional veterinarians first.
